REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

- With regard independent claim 1, as the closest reference on record, Murata et al (US 6,781,946) shows an optical pickup device in Figs. 2 and 15 including: a light source 12; an objective lens 16 for focusing light of the light source onto an optical disk; and lens protector 29 including a projection 29 that projects toward a recording medium and projects out of a surface of the objective lens facing the recording medium, for preventing collision of the objective lens and the recording medium. Murata et al **does not show** that the lens protector is a shock absorber; and Murata et al **further shows** that the projection is made of fluorocarbon, as disclosed in attached web report fluorocarbon film has surface resistivity more than $10^{16} \Omega$ (See attached Web report p. 4), **which is higher than $10^{10} \Omega$.**

Applicant asserts: by using Applicant's invention, dust or particles do not adhere to the projection by the charge generated when the recording medium is in contact with the projection, and the recording medium will not be damaged even when the projection collides again with the recording medium. As a result, signals (information) can be recorded or reproduced without errors caused by the damage to the recording medium (Specification, p. 12).

Conclusion

2. The prior art made of record in PTO-892 Form and not relied upon is considered pertinent to applicant's disclosure.
